5 municipalities in the department of Nariño

Territorial extension

Our Products

- Product Description: Agroecological, natural, gastronomic, and artisanal products from the SPG Agroecological Producers Network.
- Product Qualities: Food produced by farming families: agroecological products, fruits, vegetables, tubers, natural and processed products, traditional and healthy gastronomy.

A great project behind this product

This is a collaborative process to promote and develop a space for meetings, responsible consumption, and fair trade in Pasto. It is based on the principles of agroecology, sustainable local development, and the social and solidarity economy. The process connects producers and consumers through a direct exchange of products and services via the delivery of a monthly "green basket" with organic products from the municipalities surrounding the Galeras volcano.

Words from the heart

“
The Agroecological Producers Network and our "Green Baskets" initiative advocate for responsible and supportive production and consumption, creating a conscious attitude among consumers. This encourages them to choose goods and services that promote people's health, nature conservation, social equity, and commitment to the environment. Thanks to this initiative, around 25 families in the city of Pasto now have agroecological products on their tables, directly from the hands of the producers. With this project, we continue advancing the transformation of our territory and understanding that healthy living comes from healthy food. With the support of the Suyusama Foundation and the Comparte Network, we are advancing in our territorial positioning and sustainability for a good life.
”
