

Bio Tierra

TECHNICAL DATA

Name: Bio Tierra

Start year: 2021

Number of families involved: 5 families

Value chain: Agro-ecological bio-inputs

Location of the producer organisation: Varsovia, San Juan

Ostuncalco, Quetzaltenango, Guatemala.

Accompanying social centre: SERJUS

Website: <https://www.instagram.com/biotierra.gt/>

Contact: 55931438

Production of 3x3mts
Territorial extension

400L
Quantity
produced

750US\$
Annual
turnover

Our products

- MM3 Gallon
- MM3 Litre
- MM3 Atomiser

We started Bio Tierra in 2021. After three years, our project has a special manufacturing module. We have taken on the task of collecting, processing and marketing the products. Each of them have been tested and are applied in our own crops of tomato, chilli, pepper under greenhouse, medicinal plants, fruit trees, milpa system and the MM3 spray is used especially for ornamental plants.

We demonstrate our commitment by following up with those who purchase our products to ensure efficacy, as well as the satisfaction of those who entrust us with their crops.

A great project behind this product

Bio Tierra was born out of the 'Mujeres Virtuosas' self-saving project. Our enterprise arises as a response to the excessive use of chemical fertilisers, pesticides and herbicides that not only affect pests, but also damage the health of those who consume the plants/crops, contaminate the water and damage the micro biota of the soil. Bio Tierra contributes to the political, social and especially economic empowerment of women.

We participate in fairs, local and national markets in order to offer an alternative production to peasant women and men for the good production and care of the land.

Some words from the heart

'Our products are for the care of plants and for the rescue of Mother Earth as a cosmogonic principle. What we sell goes hand in hand with what we harvest'.
